

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture or by using more intensive farming methods.

Another way to meet this demand is to reduce the amount of food that is wasted. This can be done by improving food storage and distribution systems or by changing eating habits.

It is important to find ways to meet the world's growing demand for food and other resources without harming the environment or the world's food supply.

One way to do this is to use more sustainable farming methods. This means using methods that do not harm the environment and that can be used for a long time.

Another way to do this is to reduce the amount of food that is wasted. This can be done by improving food storage and distribution systems or by changing eating habits.
